

Partnership with global potential: Billennium and WEBCON Respond to the Challenges of Digital Transformation

Billennium and WEBCON have entered a strategic partnership aimed at strengthening both companies' positions in the global business process automation market. The collaboration between two Polish technology organizations with international reach addresses the growing needs of global enterprises, particularly in regulated industries, for fast digitalization, security, regulatory compliance, and readiness to adopt AI-driven solutions.

The partnership with WEBCON marks an important step in the execution of Billennium's growth strategy as a global enterprise-class technology integrator. For years, Billennium has been supporting clients from the most demanding industries - from pharmaceuticals and finance to energy, public sector, and manufacturing - delivering solutions in system integration, automation, data management, cloud, and artificial intelligence.

Complementary Expertise and Global Reach

Billennium delivers projects for clients across Central and Western Europe (DACH, Benelux, Nordics), North America, and the APAC region. With delivery hubs in Poland, India, Canada, and Malaysia, the company effectively combines global scale with deep expertise in local regulations and business environments. This is particularly critical in industries where compliance with regulations such as the AI Act, NIS2, or DORA is a fundamental requirement for operating in the market.

As the largest Polish provider of a business process automation and orchestration platform, WEBCON brings to the partnership a proven technology that enables rapid development of process applications with full governance, auditability, and security from day one. Thanks to the InstantChange™ mechanism, organizations can modify processes while they are running - without system downtime - providing a tangible competitive advantage in today's fast-changing regulatory landscape.

A Partnership That Addresses Real Client Needs

The partnership was driven by growing customer demand for solutions that not only digitize processes but also allow automation to scale quickly and integrate seamlessly with data, cloud, and AI initiatives. By combining Billennium's consulting and implementation expertise with the WEBCON platform, projects can be delivered faster, with lower risk and greater predictability of outcomes.

Clients gain the ability to start automation with a single, well-defined process, quickly achieve measurable results, and then scale further initiatives within the same technological environment. Billennium's experts support organizations at every stage - from process analysis and regulatory assessment, through implementation, to building internal team competencies.

For WEBCON, the collaboration with Billennium means access to a broad portfolio of global customers and the ability to scale platform deployments in international, highly regulated environments. Billennium, in turn, expands its portfolio with a platform that sets standards for

enterprise automation. WEBCON gains a partner with global reach and deep expertise in the world's most regulated industries.

Polish Technology with Global Potential

The partnership between Billennium and WEBCON is also a clear signal of the growing strength of Polish technology companies on the international stage. Both organizations develop homegrown technologies, invest in Polish engineering talent, and demonstrate that solutions created in Poland can successfully compete with global vendors, also in areas where trust, security, and strict regulatory compliance are critical.

This collaboration strengthens Billennium's position as a global enterprise technology integrator and marks a new stage of growth for both companies - built on scalable process automation and readiness for the challenges of the AI era.
